

Daylight delivers integrated solutions

In today's competitive market you need every edge to win meeting and event business. Daylight 6.5 has two new integration solutions that give you the ability to provide accurate, timely responses to RFPs. This gives you the edge of providing superior customer service to create a great first impression.

BETTER SOLUTIONS TO DRIVE BUSINESS

Daylight 6.5 includes eProposal[®] and Passkey[®] integration solutions to empower you to better manage your business and provide superior customer service. First class impression and improved overall response time are two elements of the eProposal and Passkey integration.

INTEGRATED EPROPOSAL[®] FUNCTIONALITY

The latest release of Daylight comes with an integration solution that works with Cendyn's eProposal to provide you with the ability to respond to RFPs before your competition. eProposal offers graphics, rich content, multimedia options and resource documents that help individual properties create a first class impression.

Now with Daylight you can select booking information you want to have saved to eProposal. Once the information is saved you can create, modify, view and send an eProposal to your potential customer. This limits the need for duplicate data entry and allows you to provide prompt customer service to close the business.

INTEGRATION SOLUTION WITH PASSKEY[®]

Having to enter data into multiple systems for a booking can open you up to potential inconsistencies and errors. Daylight's integration solution allows information in Daylight to move to Passkey reducing the need to enter duplicate data.

The Passkey system is an online booking engine that lets group attendees make, manage and modify their hotel reservations online. Daylight's integration to Passkey will provide an automatic interface for sending new and modified booking information (general booking info and guestroom block) from Daylight to Passkey.com's HotelDirect product.

Daylight's improved tools help you better manage your group housing process. This ensures consistent information on new bookings, changes to bookings and guestroom pickup numbers are sent to Passkey. The Booking Export configuration allows for flexibility so booking information can be sent from Daylight to Passkey using booking status, type, housing method, arrival and departure date range and number of guestrooms.
